

**When storage space is a problem,
Gratnells Roller Storage
is the ideal solution.**

Science storage must meet a number of security, health and safety, welfare and management criteria. This is much harder to achieve when floor space is restricted and static storage systems cannot be considered.

The prep room is at the heart of science teaching. So a well organised, resourced and suitably sized space is essential to create a positive working atmosphere for technicians and support the teaching of science. But all this is much harder to achieve when

floor space is restricted and static storage systems cannot be considered.

To overcome this problem, Gratnells has introduced its Roller Storage range. This roller-based storage method offers a flexible, mobile answer to

high density storage requirements. The range comprises high quality units from leading manufacturers.

Each one can be fitted with the Gratnells patented tray and runner system, set 25mm apart, allowing the standard Gratnells

Fitted with Gratnells trays, inserts and lids.

four depths of trays to be accommodated, along with accompanying lids and inserts.

Gratnells Roller Storage uses floor-mounted tracks to glide each mobile racking unit effortlessly via an operator handwheel.

An anti-tilt device running inside the track ensures the stability of units at all times, making the system totally safe and secure.

Should the floor surface be uneven, a high quality 18mm chipboard infill floor can be fitted to the entire

area of the mobile shelving system, providing an overall level floor surface. Carpet or floor tiles can be added to the infill floor if required.

Ramps can be fitted to every access point, allowing access into the open system by trolley or wheelchair.

Each handwheel locks the drive mechanism and allows safe entry into the open aisle when depressed.

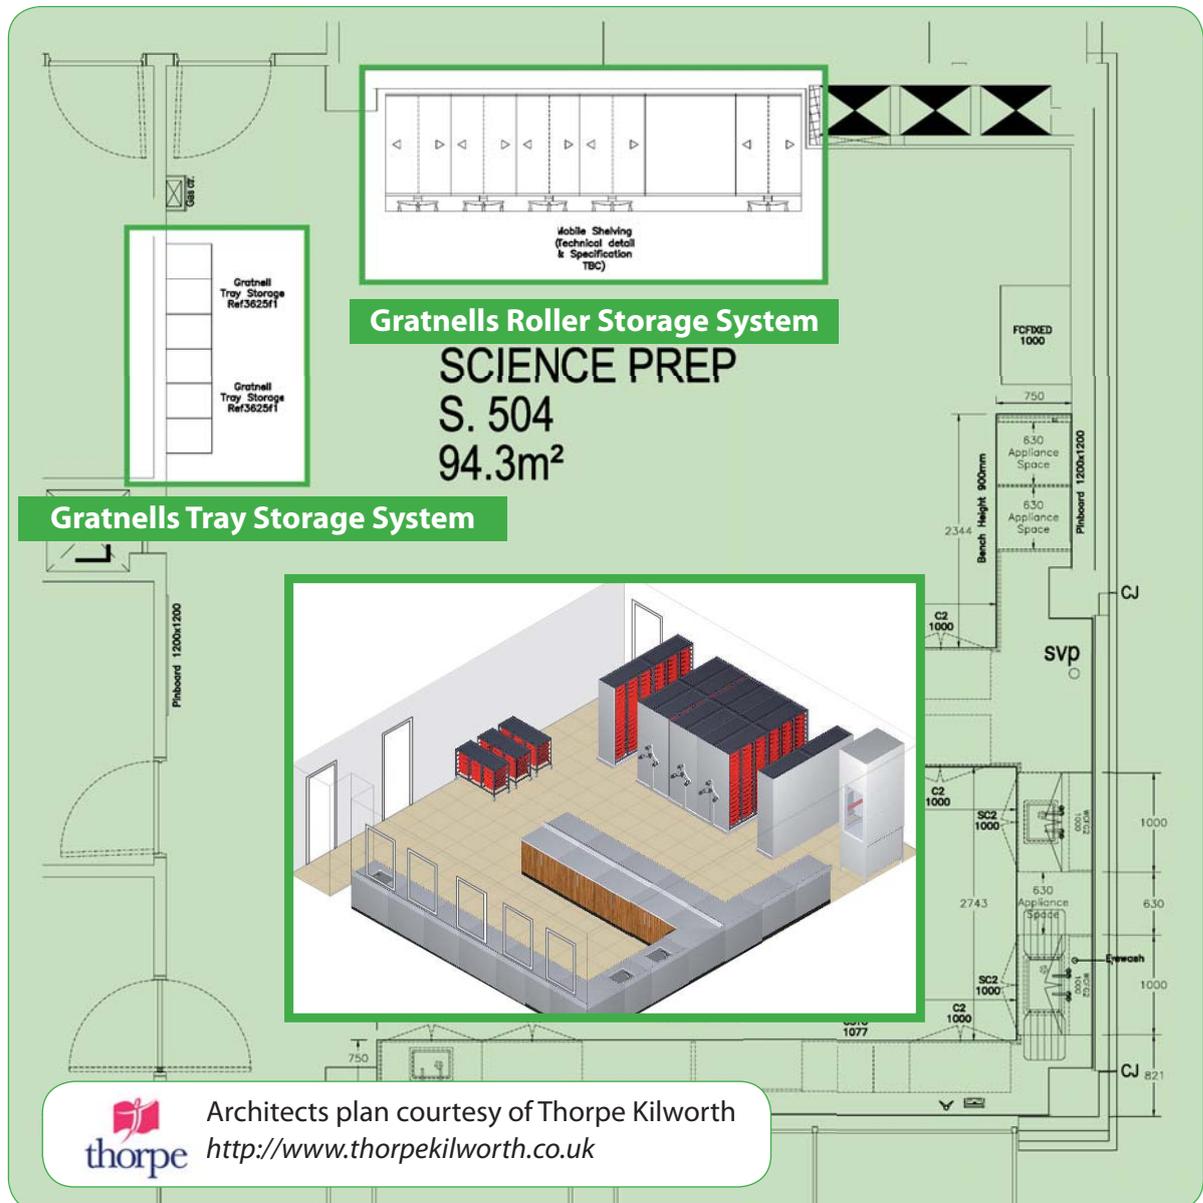

Every Gratnells Roller Storage unit can be finished in an epoxy polyester coating to provide a high quality and durable finish, with a wide range of colours available to order that will suit any environment.

Standard finishes (selected ranges)

- Units: Black or Smoke White (RAL 9002)
- Tracks: HR 43/35 Steel
- Infill floor: Natural (or textured chipboard)
- Carpet Tiles: Typhoon or Hurricane ranges
- Vinyl Tiles: Polyflex plus range

Decorative end panels in coloured or patterned laminate/wood veneer are available, allowing for further co-ordination with any interior design specification.
