INTRODUCING

Gratnells Modulus

Storage re-imagined

Images are AI-generated for inspiration; feasibility will be confirmed in review

Gratnells Modulus

When you need a storage solution that doesn’t exist off the shelf, Gratnells Modulus can create it.

Some environments need a trolley with a specific footprint. A frame built around a particular workflow. A configuration that standard products can’t deliver. When that happens, we can customise our existing trolleys and frames to meet your exact requirements.

We produce customised trolleys, frames and trays for customers who rely on consistency, durability, and repeatable performance, from global educational brands to engineering companies handling high-precision parts.

And when a project needs a specific visual identity, we can colour-match our award-winning tray range.

A bespoke product gives you something distinct, whether you’re a solution-orientated reseller or solving a challenge inside your own organisation.

We can also mould customised trays for customers who require unique storage solutions and choose to invest in dedicated tooling.

Minimum order quantities & T&Cs apply.

Projects we've delivered

A STEM trolley that became the heart of a global learning programme

A partner needed a mobile unit that simply didn't exist: a wide work surface, deep storage, integrated tools and the durability to survive daily hands-on use. We adapted one of our proven trolley systems, re-dimensioned it, added specialist features and created a unit that became the centrepiece of their STEM offer. It now ships in ongoing production runs and is a flagship product in their global range.

A high-precision tray that transformed industrial pick-and-pack accuracy

A global engineering company needed a way to organise niche, high-value metal components during inspection and dispatch. We developed a customised tray with precise internal geometry, reinforced edges and the strength to withstand constant handling in a high-throughput environment. Rolled out across their international distribution centres, it helped reduce handling time, improve accuracy and streamline a critical stage of their workflow.

Customised healthcare trolleys for a rapid national rollout

During the global health crisis, the UK National Health Service required a trolley configuration that could support a very specific clinical setup, and they needed it deployed at scale, fast. We adapted one of our existing trolley systems to support their workflow. The result was a robust, easy-clean unit that could be produced in high volumes and rolled out across multiple sites, helping clinical teams work efficiently during a critical time.

The Modulus process

1 **Define the requirement**

You share the need, the insight or the gap in your range or workflow.

2 **Feasibility review**

We assess materials, tooling, durability, colours, formats, and the commercial viability of the required volumes, including minimum order quantities.

3 **Design and prototype**

Our engineering and design teams develop samples for testing and refinement.

4 **Production**

Once approved, we manufacture consistent, high-volume batches.

5 **Launch**

You take a product to market, or into your own operation, that no one else offers — built around real demand and backed by Gratnells quality.

Minimum order quantities & T&Cs apply.
